Experience

Nielsen

Software Development Engineer Intern

Gurgaon, India

Feb 2026 – Present

- Delivered end-to-end full-stack features across CMI (Nielsen One) using Spring Boot and Angular, implementing REST APIs, front-end components, business logic, and Tag API integrations.
- Designed and implemented the MDAR Configuration and Optional Click Tags workflows by developing dynamic UI components, backend services, request payload generation, validation logic, and tag insertion pipelines.
- Investigated and resolved a critical production issue preventing Custom Campaign placement performance and impression reporting by unifying processing logic and restoring analytics accuracy.
- Implemented post-impression campaign account creation toggles, automated DAR placement tag generation, migrated multiple services from Maven to Gradle, and contributed to production bug fixes and testing.

FutureSense Technologies

Data Science Intern

Remote

Jun 2025 – Aug 2025

- Analyzed 100K+ marketing records using Python, Pandas, and Power BI to identify customer acquisition trends and generate actionable business insights.
- Developed five interactive dashboards enabling self-service KPI monitoring and reducing manual reporting effort for stakeholders.
- Built an end-to-end preprocessing pipeline including feature engineering, outlier handling, normalization, and missing value treatment to improve downstream model quality.

Projects

Self-Evolving Research Agent | Python, FastAPI, Neo4j, FAISS, Gemini API, D3.js

[GitHub]

- Built an autonomous research agent that continuously ingests papers from arXiv and Semantic Scholar, extracts structured knowledge triples using Gemini, and incrementally evolves a Neo4j knowledge graph.
- Designed a hybrid RAG pipeline with an intent-aware router selecting graph traversal, vector search, or hybrid retrieval to generate grounded responses with cited evidence.
- Implemented semantic entity resolution using sentence embeddings and cosine similarity to eliminate duplicate entities while preserving graph consistency.
- Developed an interactive D3.js visualization platform with learning path generation, graph exploration, and citation-aware navigation deployed on Render with Neo4j Aura.

JobSyncPro – AI-Powered Job Matching Platform | Python, React, NLP

[GitHub]

- Developed an AI-powered resume analysis platform evaluating ATS compatibility by comparing resumes against job descriptions using NLP-based semantic matching.
- Built an automated resume parser with entity extraction, skill-gap analysis, and personalized recommendations to improve role-specific resumes.
- Implemented an AI interview assistant generating dynamic technical and behavioral interview questions tailored to different job roles.

Technical Skills

Languages: Java, Python, JavaScript, SQL, HTML/CSS

Backend & Frontend: Spring Boot, FastAPI, Flask, REST APIs, Angular, React, Next.js

AI/ML & Databases: LLMs, RAG, Knowledge Graphs, Gemini API, FAISS, Scikit-learn, XGBoost, Neo4j, MongoDB, MySQL

Tools & Cloud: AWS, Docker, Git, Maven, Gradle, Render, Power BI, D3.js

Education

Lovely Professional University

B.Tech in Computer Science & Engineering (CGPA: 8.69/10)

Punjab, India

Aug 2023 – Present

Delhi International School

Intermediate: 83.33% | Matriculation: 96.62%

New Delhi, India

2020 – 2023

Achievements & Certifications

- **LeetCode:** Achieved a rating of 1631 (Top 19%), solving 200+ algorithmic problems across data structures and algorithms.
- **Open Source:** Ranked among Top 200 contributors in SWOC/VWOC, delivering 15+ merged PRs for performance optimization.
- **Academic Honors:** Dean's List recipient at Lovely Professional University for academic excellence (Top 10% of batch).
- **Certification:** Microsoft Certified: Azure Data Fundamentals (DP-900).
